

JUNGWON JUNG

QA Engineer · Developer Background

Katowice, Poland · +48 572 370 243 · wjdwd1501@gmail.com

jay-portfolio.dev · github.com/jungwonJung

PROFILE

QA Engineer with a backend development background — 3+ years building and shipping production APIs before moving into quality. That engineering context means understanding failure modes from the inside: not just reproducing bugs, but knowing why they happen. Experienced in API testing (Postman, Swagger), test coverage from scratch (Jest, **17% → 82%**), and manual QA across backend and data pipelines. ISTQB Foundation Level in preparation.

EMPLOYMENT HISTORY

Data QA Analyst, Telus Digital

Kraków, Poland

Oct 2024 – Present

- Applied structured QA methodology — test case design, acceptance criteria validation, and defect documentation — to ML data pipelines at scale
- Maintained **95%+** accuracy across all batches through systematic consistency checks and cross-batch regression validation
- Documented QA standards and onboarded new hires on testing workflows, defect reporting, and best practices

Full-Stack Developer Intern, Avelinix

Kraków, Poland

May 2024 – Aug 2024

- Participated in QA reviews and executed manual and regression testing across frontend and backend
- Identified and documented defects; verified fixes through structured retesting before production release
- Collaborated cross-functionally to validate feature delivery against acceptance criteria

Career Break · Personal Travel · Jan 2023 – Apr 2024

Backend Developer, FlareLane

Seoul, Korea

Sep 2021 – Jan 2023

- Designed API test scenarios and validated edge cases for 30+ REST endpoints, including real-time payment flows
- Built unit and integration test coverage in Jest, growing it from **17% to 82%** — significantly reducing regression risk
- Executed API validation with Postman collections and verified contracts via Swagger; reported defects with clear reproduction steps and evidence
- Collaborated in code reviews with focus on testability, error handling, and failure-mode coverage

Backend Intern, Shipda

Seoul, Korea

Mar 2021 – Aug 2021

- Wrote the first test suite for the product, establishing a baseline for API reliability
- Created test cases and verified edge cases for core backend APIs during initial product development

APP RELEASE QA

Sole developer and QA for 3 iOS apps shipped to the App Store — responsible for the full pre-release test cycle on each, with no QA team to fall back on.

- PARKinPL — validated GPS zone detection accuracy across 6 Polish cities; edge cases included boundary crossings, signal loss mid-zone, and cold-start location acquisition
- Challengers — tested real-time state sync across multiple accounts; verified challenge creation, ranking updates, and push notification delivery under concurrent use

- Dev60s — validated timer logic, answer evaluation, and session state across difficulty levels; regression-tested each update before release

EDUCATION

B.Sc. Computer Science (Mobile & Cloud)

Oct 2023 – Mar 2026

WSB University, Poland · Full-time

CERTIFICATIONS

ISTQB Certified Tester Foundation Level — *in preparation*
